DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 1-6 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-2, 5-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Eromaki et al. (U.S. Patent No. 6,748,249) in view of Nguyen et al. (US 2003/0103041 A1).

Regarding claims 1 and 6, Eromaki et al. teaches a portable digital communication device comprising: a main housing provided with a display unit (e.g., DPL1 – see figures 2, 4-5) on a top surface thereof; a first key pad (e.g., KB1 – see figures 2, 5) being capable of sliding on the top surface of the main housing in a first direction relative to the display unit so as to open and close a first side of the display unit (see figures 2 and 5). Eromaki et al. does not specifically teach a second key pad being capable of sliding on the top surface of the main housing in a second direction relative to the display unit so as to open and close a second side of the display unit and being capable of sliding toward and away from the first key pad. However, the preceding limitation is taught in Nguyen et al. (see figures 1 and 2, the abstract, claims 1, 2, and 16). It would have been obvious to one having ordinary skill in the art at the time the invention

Art Unit: 2617

V

was made to apply the teaching of Nguyen et al. to the teaching of Eromaki et al. to provide an adjustable form factor for handheld devices that provides functionality in both extended and compact forms.

Regarding claim 2, Eromaki et al. teaches the portable digital communication device according to claim 1, wherein the display unit is located in an intermediate portion of the top surface of the main housing (see figures 2-12).

Regarding claim 5, Eromaki et al. teaches the portable digital communication device according to claim 1, wherein the first key pad further comprises a microphone on the top surface thereof, and the second key pad is provided with a speaker on the top surface thereof (see column 2, lines 56-58).

4. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Eromaki et al. (U.S. Patent No. 6,748,249) in view of Nguyen et al. (US 2003/0103041 A1) and in further view of Humphreys et al. (US 2003/0143961 A1).

Regarding claim 3, Eromaki et al. in view of Nguyen et al. teaches the claimed invention except the main housing comprises: at least one functional key located on a side surface thereof; a headphone jack and a volume adjusting button mounted on a side surface thereof; and a battery pack disposed on a bottom surface thereof. However, the preceding limitations are taught in Humphreys et al. (see figure 1 and paragraphs [0028], [0029]). It would have been obvious to one having ordinary skill in the art at the time the invention was made to apply the teaching of Humphreys et al. to the teaching of Eromaki et al. in view of Nguyen et al. for enclosing the internal components of a mobile device that is economical, ergonomic, and to provide reasonable

Art Unit: 2617

environmental protection while does not unduly increasing the size, weight, and ease of use of the device.

Allowable Subject Matter

5. Claim 4 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Regarding claim 4, Miyake et al. (US 2002/0065102 A1) teaches a portable telephone that has a cylindrical lens housing and a shutter, the cylindrical lens housing having a camera (paragraphs [0049], [0056]). However, Eromaki et al., Nguyen et al., Humphreys et al., and Miyake et al., either singularly or in combination, fail to teach that the cylindrical lens housing having a camera lens exposed between a side surface of the main housing and a bottom surface of the main housing, the main housing having a rotation axis which is parallel to and spaced a predetermined distance from a virtual plane on which the first and second key pads linearly move, the camera lens being rotatably mounted between the side surface and the bottom surface.

Contact Information

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Huy D. Nguyen whose telephone number is 571-272-7845. The examiner can normally be reached on M-F.

Art Unit: 2617

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph H. Feild can be reached on 571-272-4090. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
